Sire Summary 2024

VV140138 'FYFE': Another Son of the great VV38-09. Producing a very exceptional line of progeny. Supreme Poll Dorset Ram at AS&WS 2015.

VV190514: A son of TAT400-17, retained for structural correctness, this is his first crop of sons but keep an eye out over the years for many more as he has bred exceptionally well already. Low-birth weight sire.

VV190493: By SW250-27, this is another low-birth weight sire. He's a clean pointed ram that has also bred exceptionally well in his first season at Valley Vista.

VV200086: Retained sire from the 2020-drop, son of Derrynock 33-18. A high indexing fast growing sire that was used as a ram lamb and kept on at Valley Vista after impressive results in the Bowan Park trial and lambs on the ground at Valley Vista.

VV210006: A Tattykeel 400-17 son that had a very successful show career and has backed it up by producing some great sons. A real industry leading sire that was a standout at weaning and continued through to be one of our carcassed and correct rams at Valley Vista. Will be used heavily over the years.

VV210079: The best son of VV Fyfe we have bred, used heavily in our AI program. Very structurally sound sire that has also won many awards and sold to \$10,000 to Bygo Poll Dorset stud in 20222.

VV2210155: The most successful ram on the show floor bred at Valley Vista to date. Nationally Champion of Champions Poll Dorset Ram of 2022, having won a swag of accolades. Will play a big role in the future of Valley Vista. A sire full of length, muscle and bone, his sons are very very impressive, do not miss out.

Tattykeel 140090: Purchased to continue our Tattykeel family. Was an outstanding ram lamb weighing 85kg at 5 months old. Champion Ram Lamb Australasian Dorset Championships 2014.

Springwaters 170250 (Taz): Has been a very impressive Sire producing a stylish, fast maturing very sound line of offspring.

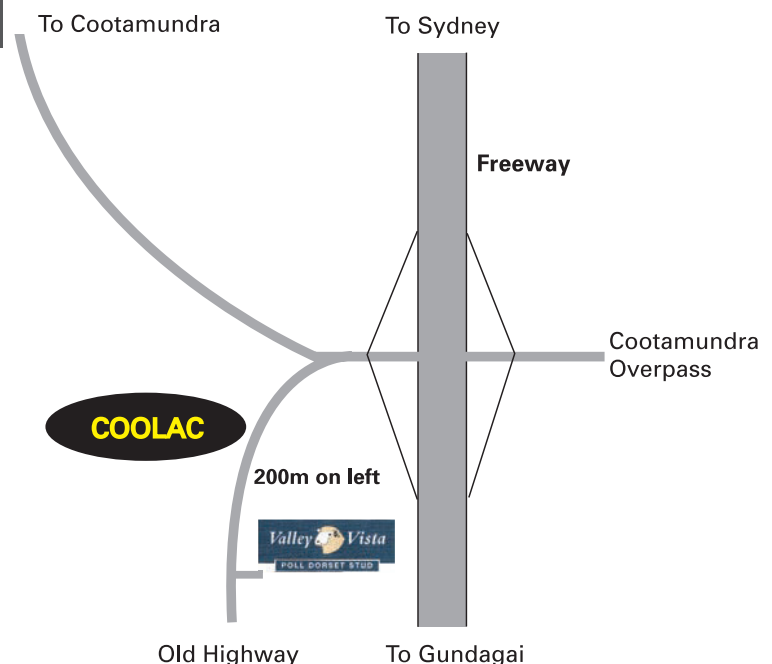

Derrynock 180033: Purchased for \$19,000 for his high indexing LambPlan data and impressive growth PEMD, and overall index.

Hillden 190110: A prominent AI sire at Valley Vista, with an impressive show history. Has produced sons with presence and length, and we couldn't look past using him again after the performance of his first joining.

TAT 200274: Purchased for \$32,000 from Tattykeel in 2021, powerful bodied sire with all the traits that the Poll Dorset breed needs.

How to find Valley Vista

Take the Coolac/Cootamundra turn off from the new Hume Freeway, turn left at the Coolac Pub and Valley Vista is about 200m on the left

Look no further than Valley Vista

If you are looking for Poll Dorset rams which will produce lambs for every market then you should look no further than the Valley Vista stud. The Valley Vista Poll Dorset stud was founded in 1976 and moved from its original home at Burrumbuttock, New South Wales, to Coolac, NSW in 1990. The stud was expanded in 1991 when Valley Vista stud principals Andrew and Donna Scott purchased the entire Meadow Creek stud from the late Ernie Britt. There was further expansion for the stud in November 2006 when the Scotts purchased 550 ewes and stud sires from the Gererdan stud, which at the time was among the top studs in Australia. In 2008 Joe, James and Luke Scott founded the Valley Vista Park stud with the purchase of 18 stud ewes at the Kismet dispersal sale. The Scotts have continued to add to their genetic base over the years with purchases of genetics from the Armdale, Armdale Park, Tattykeel, Hillden, Kurralea, Graythorn, Springwaters and Derrynock studs. Combined the studs have built the numbers up to approximately 1000 stud ewes. This provides good numbers to select from, allowing the stud to cull heavily.

When selecting rams for their stud's breeding program the Scott's have placed emphasis on traits such as ease of lambing and high growth rates. They also place emphasis on producing a well-muscled and structurally correct sheep. One of the main selection criteria is selecting for high growth rate. All lambs are weighed at weaning and then twice more at thirty day intervals. These weights are converted to grams/day. Lower than 300 to 350 grams/day are culled. The lambs doing better than 300 to 350 grams/day (depending on the season) are retained in the stud. The stud also scans all rams, using Stockscan, for muscle area and individual data on each animal. Scans are also combined with further data recorded on-farm to produce up-to-date Lambplan figures.

The family and the flock continue to grow with an increased number of stud lambs hitting the ground this year, building numbers up on the back of consecutive good seasons. We've also increased the number of on-property sales, adding a January auction and including ewes in the offering. What has decreased is the age they are turning off rams, moving more in-line with their clients needs and industry markets. A majority of the rams offered at Valley Vista are now 12 months old or younger, which has been well received by their commercial clients, a majority of which use them over Merino ewe flocks. The younger aged rams now give clients a better opportunity to utilise the very best genetics. It also gives them a chance to see the early development of the sheep, which is what they are after when breeding for the sucker lamb market.

Valley Vista held its inaugural summer sale in January 2022, offering 2021 spring-drop rams at just nine to 10 months, as well as a selection of mixed-age scanned-in-lamb stud ewes. The results achieved from both were above expectation, and showed it was a step in the right direction. The summer sale is now a part of our annual program.

Valley Vista has been involved in the Poll Dorset Research Flock, Bowan Park, for the past few years, and in 2021 nominated our homebred sire Valley Vista 200086, as well as a sire we purchased in 2018 and have used widely in the stud, Tattykeel 170400. The trial collected carcass data from 12 lambs per sire in 2021, including intramuscular fat (IMF) levels - a measure of the chemical fat percentage in the loin muscle of a lamb, and the visible marbling. IMF impacts the eating characteristics of lamb, including flavour, juiciness, tenderness and overall liking. The two rams entered by Valley Vista in the Bowan Park trial sired lambs with the highest average IMF percentages of the cohort - 4.77 per cent and 4.98 per cent. The industry mean average at the time of collecting the data was 4.3 per cent.

In 2022 Valley Vista 210155 won the WFI Champion of Champions Poll Dorset Ram, being crowned the supreme champion for the year. In 2023, we followed on from that success by winning supreme shortwool interbreed exhibit at the Australian Sheep & Wool Show with a ewe, Valley Vista 220076. Demonstrating the focus on both sides of the pedigree and the traits the commercial industry is looking for, Valley Vista also exhibited both the winning Poll Dorset ram lamb (VV230135) and ewe lamb (VV230154) at the ASWS. We backed up both the winning ewe and ram lamb ribbons in 2024, and VV230154 returned to the same show with great success, being sashed reserve champion shortwool interbreed exhibit.

The winning ewe lamb from NSW Dorset Champs and ASWS this year, VV250154, just last month was sashed champion ewe lamb and then champion lamb overall at the Australasian Dorset Championships.

ASBVS and Indexes explained

What are ASBVs?

ASBVs are the units of measurement LAMBPLAN use to analyse animals. Australian Sheep Breeding Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits. Indexes combine important production traits into one number and are a useful way to rank animals quickly and easily.

ASBV types

Birth Weight (BW): ASBV is based on measured birth weight of lambs adjusted for age of dam. Where birth weights are not available it is estimated as a correlated trait from weight measurements taken as the lamb matures. The lower the ASBV the lighter is the estimated progeny birth weight potential.

Weight (WWT) (PWWT): ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), post-weaning (200 days), and yearling, hogget and adult ages.

Fat Depth (PFAT): ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

Eye Muscle Depth (PEMD): ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

Intramuscular Fat (IMF %): Rams with more positive IMF ASBVs produce progeny with higher levels of intramuscular fat. (IMF is a measure of the chemical fat percentage in the loin muscle of a lamb, and is often referred to as marbling. IMF has been shown to have a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb

TCP Index: The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

Ultrasonic Rib Eye Muscle Scanning In Live Sheep

Meat Index

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher weighting is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environmental factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep to get an index.

NOTE:

- Current Live Weight = C/LW
- Eye Muscle Area (EMA) is calculated using the eye muscle width and eye muscle depth measurements.

Fertility is the only figure that counts

After pregnancy scanning sheep both here and in New Zealand for more than 25 years, Andrew has seen first hand the different levels of fertility in a wide variety of sheep flocks.

As genetics advanced both here and across the ditch, he established that most of the maternal ewe fertility in Australia was not at the level of what was being achieved in New Zealand.

While some great results were definitely being achieved here in Australia, the New Zealand producers as a majority were pulling ahead. This led to the Valley Vista Maternal program being established in 2016, and the introduction of the Romney breed into a specific line of breeding.

In New Zealand, a varying percentage of Romney is used in most maternal breeding operations, and are used for their doing ability, fertility, hardiness and black feet.

We first sourced rams from the Wairere stud and Tintern stud, both in Victoria, and joined them to a select group of our maiden Poll Dorset ewes - only those that were twin or triplet born.

The multiple ewe lambs from this joining were then used to establish a maternal ewe flock, with high fertility the number one priority. Right from the start of the program, only multiple born lambs have been retained with all singles and all dry ewes culled.

Soon after the establishment of the Valley Vista Maternals breeding program drought conditions ensued and this put added selection pressure on the flock.

Their doing-ability shone through, and they held their condition exceptionally well.

A couple of very wet years followed and the maternals also held up to these conditions very well thanks to the black feet.

We have been trialling the rams from this flock at our commercial property, joining them to our Merino ewe flock.

When Valley Vista Maternals were joined to maiden Merino ewes, and the ewe lambs from that joining were retained.

They have recorded scanning percentages of 137% in lamb, and marked at 122% from an unassisted lambing.

On top of this, at 12 months old these ewes cut an average of 4.1kg of 24.1 micron wool that was sold for \$6/kg.

We have now progressed the Valley Vista Maternal flock to the stage where we are happy to offer our clients rams that are full of fertility and growth in a medium frame.

Valley Vista Maternal rams will be available for inspection and purchase at this year's sale, with a supplementary sheet of lots available on the day.

VV230154 Grand champion Poll Dorset ewe and reserve supreme shortwool interbreed exhibit Australian Sheep & Show 2024

VV240154 Champion Lamb, Australasian Dorset Championships 2024.

TUBELINE WRAPPER

Looking for a cost effective way of wrapping silage?

- 40% cheaper than individually wrapped bales
- Easier to feed out and less plastic used
- Stores silage effectively for at least two years
- Wraps up to 80 bales of silage an hour
- Bales can still be transported with plastic on

Part A To be completed by the owner or person who is responsible for the husbandry of the sheep or lambs.

Owner of sheep or lambs ABH DL SCOFF (FULL TRADING NAME)
 Property/place where the journey commenced Valley Vista Coolac (ROAD ADDRESS)
 (ADDRESS CONTINUED) NSW (STATE)
 (TOWN/SUBURB)

Property Identification Code (PIC) of this property NG292042
 This MUST be the PIC of the property that the stock is being moved from

Description of sheep or lambs

Number	Year born (PROP)	Description (BREED, SEX & TYPE E.G. CROSS-BRED, WETHER, LAMB)	Month of shearing	PIC or Brand on Ear Tags (IF DIFFERENT TO PIC SHOWN ABOVE)	Earmarks (IF PRESENT OR REQUIRED)
		<u>Poll Dorset Ram</u>			<u>LD</u>
					<u>LD</u>
					<u>LD</u>
					<u>LD</u>
Total					<u>LD</u>

Use the Attachment Forms for consignments that require more lines to describe the stock. (See Explanatory Notes)

A. Have PICs on all of the N LIS tags only on sheep in this consignment been listed in the Description table above (other than the PIC printed on this NVD)? - Yes OR

B. Have all sheep in this consignment been tagged with an N LIS tag with the PIC printed on this NVD or the associated WA brand as listed in the description table above - Yes AND/OR

Number of electronic N LIS devices in this consignment 8

Hours off feed and water before transporting 8

Consigned to _____ (NAME OF PERSON OR BUSINESS) (TOWN/SUBURB) (STATE)

Destination (if different) of sheep or lambs _____ (LOCATION ADDRESS)

Destination PIC (REQ: WA & TAS) _____

Details of other statutory documents relating to this movement e.g. health statement

DOCUMENT TYPE _____ NUMBER _____ OFFICE OF ISSUE _____ EXPIRY DATE / /20

1 Have these sheep or lambs been raised consistent with the rules of an independently audited QA program on the property the PIC of which is shown above?

Yes No If Yes, give details: _____ NAME OF PROGRAM _____ ACCREDITATION OR LICENSE NO. _____

2 Have all the sheep or lambs in this consignment been treated with a Scabby Mouth Vaccination either at marking or at least 14 days prior to their presentation for sale?

Yes No If Yes, give details: _____

3 Were all of these sheep or lambs bred by the owner or vendor?

Yes No If No, how long ago were the sheep or lambs obtained or purchased? (If purchased at different times, tick the box corresponding to the time of the most recent purchase.)

A. Less than 2 months B. 2-6 months C. 6-12 months D. more than 12 months

4 Are any of the sheep or lambs in this consignment still within a Withholding Period (WHP) or Export Slaughter Interval (ESI) as set by APVMA or SAFE MEAT, following treatment with any veterinary drug or chemical?

Yes No If Yes, give details: (Record additional details in question 7)

CHEMICAL PRODUCT _____ DATE APPLIED / /20 WHP _____ ESI (IF SET) _____

5 In the past 60 days, have any of the sheep or lambs in this consignment consumed any material that was still within a withholding period when harvested, collected or first grazed?

Yes No If Yes, give details: _____

CHEMICAL PRODUCT _____ DATE APPLIED / /20 GRAZING WHP _____ DATE FIRST FED/GRAZED / /20 DATE FEEDING/GRAZING CEASED _____

6 Have the sheep or lambs in this consignment ever in their lives been fed feed containing animal fats? (See Explanatory Notes)

Yes No

7 Please include any additional information below
 eg: vaccination programs, animal health certification, additional declarations, etc.

Declaration

1 Jamie-Lee Scoff FULL NAME Valley Vista FULL ADDRESS
250 Coolac Road Coolac NSW ADDRESS CONT. 

declare that, I am the owner or the person responsible for the husbandry of the sheep or lambs and that all the information in part A of this document is true and correct.
 I also declare that I have read and understood all the questions that I have answered, that I have read and understood the explanatory notes, and that, while under my control, the sheep or lambs were not fed restricted animal material (including meat and bone meal) in breach of State or Territory legislation.

Signature* J Lee Scoff Date* 4/10/20 24

*Only the person whose name appears above may sign this declaration, or make amendments which must be initialed.
 Tel no. 042 99 33926 Fax no. _____
 Email: jamilceddfield@gmail.com

Part B To be completed by the person in charge of the sheep or lambs while they are being moved.
 Completion of this part is optional in SA and VIC.

Movement commenced: / /20 (am/pm)

Vehicle registration number(s): _____ am the person in charge of the sheep or lambs during the movement and declare all the information in Part B is true and correct.
 Signature _____ Date / /20 Tel no. _____

*When more than one truck is carrying the sheep or lambs, other vehicle registration numbers are to be recorded.

SCOTTS RAM SHEARING

Based out of Gundagai NSW, Scotts Ram Shearing is willing to travel to provide you with a modern and efficient way of shearing. Give us a call or find us on Facebook or Instagram to sort out all your Ram shearing needs today.

GET IN CONTACT

Give Luke a call on **0402 744 255**, find us on Facebook or Instagram to discuss your location, number of rams and when you would like to shear. We do our best to accommodate your needs.

01

SET UP

No shearing shed is required, but power to run the trailer is essential. The trailer is 2.2m wide and 3m tall, fitting through most gates and can be set up by hooking onto any race or yard set up that is available.

02

SHEAR RAMS

No sedation is required as the Peakhill ShearEzy machine handles large sheep with ease, resulting in less stress for the sheep, in particular reducing damage to the scrotum to ensure sperm quality stays high. Scotts Ram Shearing is perfect for Stud sheep, with us taking extra care on presentation.

03

JOB DONE

Rams can be let straight back into the paddock once shorn, job done.

SCOTT'S SCANNING

PREGNANCY SCANNING OF SHEEP

ULTRASONIC SCANNING ALLOWS YOU TO

- Identify singles, twins & dries
- Manage mob by ageing lambs to split early and lates
- Increase twin survival
- Manage twin bearing ewes to rejoin in good condition
- Select twins as replacement stock
- Sell dry sheep early and free up feed
- Reduce deaths from Pregnancy Toxaemia
